BeyondSaaS Cloud-Based Vulnerabilty Assessment

Gain an Attacker's View of Your IT Environment

BeyondTrust®
VISIBILITY. KNOWLEDGE. ACTION.

BeyondSaaS™ is a cloud-based vulnerability assessment solution that delivers fast, affordable scans of internal IT assets and public-facing infrastructure, such as IoT devices and web applications.

With BeyondSaaS, you gain an attacker's view of your IT environment from both inside and outside the firewall. The solution reveals known vulnerabilities and configuration weaknesses, as well as uncommon and zero-day vulnerabilities introduced by custom applications. This is backed by straightforward reporting capabilities that deliver a clear picture of risk and provide remediation guidance.

Comprehensive, On-Demand Network and Web App Scanning

Powered by Retina, an award-winning vulnerability scanner trusted by thousands of organizations, BeyondSaaS extends BeyondTrust's legacy of delivering unmatched vulnerability management to the cloud. With nothing to install, you simply log into BeyondSaaS, specify a target IP range or web application, and BeyondSaaS handles the rest. Everything you need is pre-configured and delivered through a mobile HTML 5 interface that lets you manage and communicate risk from virtually any web browser, tablet or smart phone.

Network Vulnerability Scanning Capabilities

Assess network devices, operating systems, web applications, ports and services against a vast, continually updated vulnerability database.

- Measure PCI DSS compliance, and gauge perimeter security versus best practices
- Perform Class C network scans in under 15 minutes on average
- Profile target operating systems via Nmap and proprietary OS fingerprinting
- Scan custom machine configurations, ports and applications

Key Capabilities

- External network scanning of unlimited IP addresses
- Identify IoT devices and safely check for default or hard-coded passwords
- Black-box web application assessments
- Unlimited user accounts
- Regulatory compliance assessments for PCI DSS and other initiatives
- Clear vulnerability reports and remediation guidance
- Threat history trend reporting
- Scheduled or ad-hoc testing
- Single solution for both internal and external perimeter scanning
- Encrypted data transmission
- No software or hardware install
- No license management
- Optional 24 x 7 x 365 support
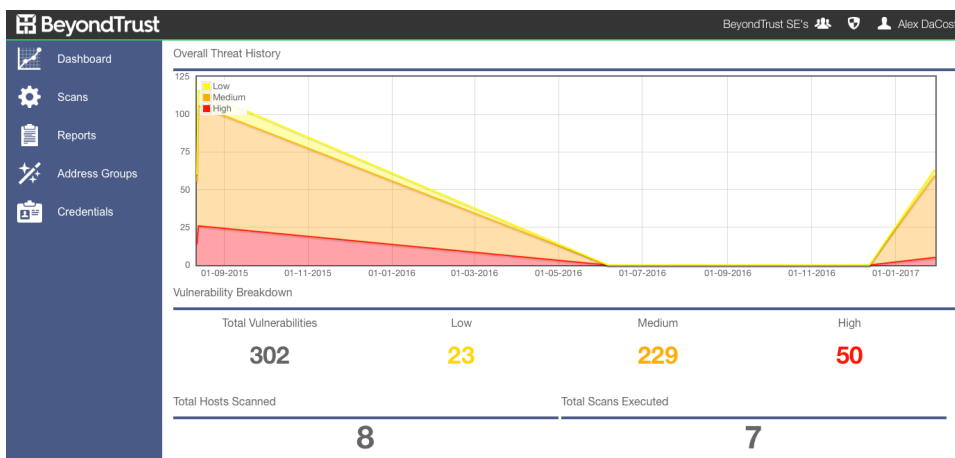

The BeyondSaaS dashboard enables you to measure and track internal, perimeter network and web application vulnerabilities over time.

How it Compares

BeyondSaaS offers several advantages over other SaaS solutions:

- Lower cost, with unlimited IP addresses and user accounts
- Broader coverage of network assets and web applications
- Fewer hassles via simplified whitelisting; straightforward address and URL targeting
- Easy to use mobile management and reporting

COMPLIANCE HIGHLIGHTS

BeyondSaaS enables you to meet vulnerability scanning requirements for PCI DSS, FDCC, SANS, HIPAA, SOX, GLBA and many other regulations. Key compliance features include:

- Automated asset discovery for broad, accurate scoping
- External and internal scanning of network assets and external web applications
- PCI reporting in the proper DSS submission format

Web Application Vulnerability Scanning Capabilities

Websites and web-based applications are favorite targets of today's advanced attacks. Lock out hackers, and stop your web applications from becoming easy paths to critical systems and data.

- Accurately crawl web pages that include technologies such as AJAX, SOAP/WDSL, SOAP/ WCF, REST/WADL, XML, JSON, Google Web Toolkit (GWT) and CRUD operations
- Scan off-the-shelf or custom-built web apps for SQL Injection, Cross-Site Scripting (XSS), Cross-Site Request Forgery (CSRF) and over 500 other web-based vulnerabilities
- Automatically crawl and scan complex password protected zones, including multi-step or Single Sign-On (SSO) with a built-in login recorder
- Audit web applications against a database of more than 1,200 known WordPress core, theme and plugin vulnerabilities
- Scan hundreds of thousands of web pages and applications without interruption, using a multi-threaded architecture

The Easiest, Most Secure SaaS Vulnerability Assessment Available

BeyondSaaS simplifies the entire vulnerability management process, enabling you to quickly identify vulnerabilities and fixes with maximum security and minimal hassle. You simply specify a target IP range or web application, and BeyondSaaS handles the rest.

- Get fast, comprehensive and accurate scanning, backed by over 15 years of expertise
- Conduct multiple vulnerability assessments after a simple, one-time registration process
- Leverage single sign-on via Active Directory and other identity providers
- Eliminate software and hardware deployment and configuration
- Manage job scheduling, results and reports through a highly secure, encrypted HTML 5 web interface
- Rely on a Microsoft Azure's highly secure multi-tenant architecture
