

PRIVILEGED REMOTE ACCESS

CONTROL, MANAGE, AND AUDIT VENDOR AND INTERNAL REMOTE PRIVILEGED ACCESS

Vendor Access

Limit vendor access via granular, role-based access to specific systems and by using defined session parameters.

Insider Access

Manage and control administrator access to systems they need — without sacrificing productivity.

Audit & Compliance

Audit privileged user activity and meet compliance requirements.

BeyondTrust Privileged Remote Access provides visibility and control over third-party vendor access, as well as internal remote access, enabling organizations to extend access to important assets, but without compromising security.

Features and Capabilities

- **Privileged Access Control:** Enforce least privilege by giving users the right level of access.
- **Monitor Sessions:** Control and monitor sessions using standard protocols for RDP, VNC, HTTP/S, and SSH connections.
- **Reduce the Attack Surface:** Reduce attacks by consolidating the tracking, approval, and auditing of privileged accounts in one place and by creating a single access pathway.
- **Integrate with Password Management:** Inject credentials directly into servers and systems with just one click, so users never need to know or see plain text credentials.
- **Mobile & Web Consoles:** Use mobile apps or web-based consoles anytime, anywhere.
- **Audit & Compliance:** Create audit trails, session forensics, and other reporting features by capturing detailed session data in real-time or post-session review, and provide attestation reports to prove compliance.

Give Them Access, Not a VPN

Works through firewalls, without a VPN. By reducing the number of VPN connections, you reduce the potential footholds your hackers can exploit to access your network.

“With the addition of Privileged Remote Access, I can more efficiently manage our vendors and support reps as separate entities, but with consistent technology.”

BUSINESS BENEFITS

Control

Enable granular access to specific systems, improving security and eliminating “all or nothing” access to vendors or internal resources.

Audit

Centrally secure and audit vendor access across a variety of environments and meet compliance mandates.

Manage

Eliminate unnecessary privileges—without impacting the user’s ability to perform their role.
